CDB/Auto-Online Copy

Features:

SHRLEVEL REFERENCE copies

Maintains full data integrity

Standard control statements and JCL

Multi-tasking

Up to 8 copies in parallel

Fully restartable

Situation

Making copies in order to backup your data is critical in case of an emergency. You know the importance of frequent backups yet you are in a busy production environment that allows for minimal downtime if any.

What is CDB/Auto-Online Copy?

CDB/Auto-Online Copy is a reliable, flexible, and easy to use utility that can automatically copy DB2 data while allowing users read/write access without experiencing any downtime.

Problem

With standard online copy products there is still a brief period of time when data is inaccessible, possibly causing an application to fail. Additionally, when using most online copy utilities there is a fear of losing data integrity. Users are constantly making updates. How is a true "point in time" copy possible when changes are being made to parts of the tablespace that have not yet been copied?

Benefits:

Elimination of -904s

Concurrent Image Copies

Guaranteed data integrity

Reduced elapsed time

Simplified utility scheduling

Reduced system load

Solution

CDB provides true "point in time" copies with guaranteed integrity and no downtime. CDB/Auto-Online Copy can automatically make full or incremental copies without disrupting user accessibility. **CDB Software completely eliminates error message   -904.**
