CDB/Auto-Online Reorg

Situation

Your company now requires greater data access than ever. Due to the need for maximum data availability, you use an online product when performing reorgs.

What is CDB/Auto-Online Reorg?

CDB/Auto-Online Reorg performs reorganizations of DB2 tablespaces and their associated indexes without using SORT, while applications are reading and updating the same data. CDB eliminates system downtime completely.

Problem

Error message -904! When using a standard online reorg there is still a period of time when data is inaccessible, possibly causing an application to fail. Application failures are extremely expensive, and although downtime is minimized, every second that data is unavailable costs your company money.

Solution

CDB Software completely eliminates error message -904. You will never experience data inaccessibility with CDB's online utilities. CDB/Auto-Online Reorg does not employ locks or stops and remains in read write access mode during the Change Apply and Rename phases.
